Amendment to the Health and Care Bill to improve the safety and regulation of cosmetic treatments – committee stage

Parliamentary briefing · September 2021

Chartered Institute of Environmental Health (CIEH)

CIEH is the professional voice for environmental health representing almost 7,000 members working in the public, private and non-profit sectors. Building on its rich heritage, CIEH ensures the highest standards of professional competence in its members, in the belief that through environmental health action people’s health can be improved.

Environmental health has an important and unique contribution to make to improving public health and reducing health inequalities. CIEH campaigns to ensure that government policy addresses the needs of communities and business in achieving and maintaining improvements to our environment and our health.

If you require any further information, please email Tamara Sandoul, Policy and Campaigns Manager at t.sandoul@cieh.org.
Context

Cosmetic treatments can include a wide range of procedures aimed at enhancing or altering appearance. There are many common treatments being offered on the high street, such as lip fillers, injectables, thread lifts, semi-permanent makeup, laser treatments, piercings and tattoos.

In recent years, there has been a significant rise in the number and type of non-surgical aesthetic procedures performed in the UK. Many non-medically and medically trained practitioners are performing treatments without being able to evidence appropriate training and required standards of oversight and supervision.

Cosmetic treatments can cause serious harm to clients if they are not carried out correctly in a safe environment or by competent and trained practitioners. Treatments that puncture the skin carry the risk of transmission of blood-borne viruses if practitioners do not take appropriate infection control measures, whilst a lack of training and competence can lead to serious injuries.

What is the amendment aiming to do?

The amendment that we are seeking introduces an enabling power for the Secretary of State for Health and Social Care to bring into force a national licensing scheme for cosmetic procedures in England*. The amendment does not outline exactly how the new licensing scheme should work, which treatments and practitioners should be included or the standards those practitioners should meet. These details will be set out in secondary legislation and statutory guidance.

More research and engagement with all stakeholders is needed to develop a scheme that will work well for all cosmetic treatments as well as providing for a practical and efficient system for members of the public, regulators and practitioners. We envisage a body of experts working to develop a set of national standards for each cosmetic treatment that a practitioner would need to meet in order to obtain a licence.

A licensing scheme for cosmetic treatments would need to:

- Be flexible to capture new cosmetic treatments coming onto the market in the future
- Set standards for training, qualifications and competency requirements for the practitioners relative and proportionate to risks involved with the treatment being performed
- Include periodic checks of premises and continuous professional development of the practitioner
- Provide clarity on the regulation of mobile or home-based practitioners
- Make provisions to ensure that all medicines, devices and products used within the aesthetic industry are appropriately and legally sourced, quality controlled and administered
- Ensure that all practitioners possess appropriate levels of medical indemnity insurance and provide access to redress schemes for members of the public, should complications arise as the result of any aesthetic procedure

---

*The amendment should also be able to be adopted by the UK Nations if there is interest from the Devolved Administrations.
Why is more regulation needed?

There is a registration scheme in England for certain special treatments, such as electrolysis, tattooing, piercings, semi-permanent make up and acupuncture. However, some of the riskier and any newer types of cosmetic treatments cannot be included within the scope of the current regulatory regime. Furthermore, the present system of registration does not allow regulators to specify conditions, qualifications and competency requirements, or to remove anyone from a practitioner register. Only a small handful of areas across England have introduced their own licensing schemes in order to protect members of the public – this is the case in London, Nottingham and Essex. A survey of regulators carried out last year found overwhelming support for the introduction of a licensing scheme, with 90% of the respondents agreeing that this could improve the regulatory system and protect the public from harm.

There are currently two Professional Standards Authority (PSA) approved voluntary registers of accredited practitioners and one voluntary register of approved education and training providers that operate in the sector. However, these are not mandatory for practitioners to join, which means that there are many un-accredited practitioners providing treatments directly to members of the public without any checks.

Ofqual are also not empowered to require training providers to evidence that their qualification is compliant with an industry standard. The development of official nationally-set standards on the training and qualification expectations for practitioners of different treatments will be key to safer practices.

The creation of a national licensing scheme in England for practitioners of cosmetic treatments would ensure that all those who practise are competent and safe for members of the public. In order to be effective, the licensing scheme should also be underpinned by the development of training and qualifications expectations for all practitioners, as well as a set of standards, such as the requirement for medical insurance. Many newer treatments fall outside the scope of the original definition of regulated treatments in Local Government’s Miscellaneous Provisions Act 1982 that local authorities use to regulate this sector. We need new legislation which is able to cope with this in real time.

What support is there for the amendment?

This amendment is supported by a number of prominent public health, professional membership bodies and voluntary registers for cosmetic practitioners, including Chartered Institute of Environmental Health (CIEH), the Royal Society for Public Health (RSPH), Institute of Licensing (IoL), Joint Council for Cosmetic Practitioners (JCCP), UK Public Health Network (UKPHN), Faculty of Public Health (FPH) and Save Face.

The APPG on Beauty, Aesthetics and Wellbeing recently recommended the implementation of a national licensing scheme to be introduced in England to improve the safety of treatments for the public, following a year-long inquiry into cosmetic treatments. There is also significant support amongst cross-party parliamentarians, with many speaking in support of better regulation in this area in Parliament in recent years.

Members the public strongly support more regulation to improve the safety of cosmetic procedures. 9 out of 10 people have said that practitioners who carry out special procedures should be legally required to hold an infection control qualification.

Furthermore, 9 out of 10 regulators – including environmental health practitioners and licensing officers – have said that they would like to see a national licensing scheme in England. A nation-wide scheme with nationally-set standards is expected to bring all practitioners up to a safe level and simplify regulatory powers.
What is the scale of the problem?

No official data is collected on how many members of the public choose to have cosmetic treatments every year. Around half of women aged 16-24 had a piercing on their body, suggesting that these treatments are more popular with younger people. Nearly one in five (19%) British adults has a tattoo and from 2004-2014, there was a 173% rise in the number of tattoo parlours in the UK. New treatments on the market can quickly grow in popularity, due to new fashion trends, celebrity endorsements and online influencers.

What problems can arise when things go wrong?

Save Face is a PSA accredited voluntary register, which has successfully campaigned for safer cosmetic treatments and published reports from patient submitted data. In 2018, Save Face received 934 reports about special treatments. The most common complaints related to dermal fillers (66%) followed by Botulinum Toxins (24%). Of these complaints, 41% resulted in corrective procedures and 4% in visits to GPs and A&E. However, these numbers are likely to be only a small fraction of those experiencing problems, concerns or complications as a result of their treatment.

The JCCP also receives regular reports of inappropriate treatment being provided by untrained and inexperienced practitioners. Many of the practitioners who are associated with these complaints have received training from unregulated training providers who have made exaggerated claims to both practitioners and members of the public with regard to their standards of proficiency and ‘fitness to practice’. The JCCP has reported in excess of 70 such training organisations to the Advertising Standards Authority (ASA) and to the Committee of Advertising Practice (CAP) since 2019.

What is happening in the UK nations?

It is intended that the enabling power in this amendment should be available to the Devolved Administrations to adopt as appropriate.

In Wales, the Public Health (Wales) Act 2017 created a mandatory licensing scheme for practitioners and establishments carrying out special procedures in Wales. The four procedures specified in the Act are acupuncture, body piercing, electrolysis, and tattooing, although there is provision to add or remove special procedures via regulations, to take account of new practices and changing trends. There will be one central register of licensed practitioners and mandatory conditions will apply, including a condition that practitioners must be trained in infection control. The scheme implementation has been paused due to coronavirus but is due to be resumed once capacity allows.

In Scotland, the Civic Government (Scotland) Act 1982 (Licensing of Skin Piercing and Tattooing) Order 2006
requires individuals who own businesses that offer acupuncture, cosmetic piercing, electrolysis, semi-permanent make-up and tattooing services to obtain a licence to operate. Earlier this year, the Scottish Government launched a consultation on whether to extend licensing under to cover additional non-surgical cosmetic procedures, including dermal fillers and botulinum toxins. The Scottish Government is currently reviewing the outcome of this consultation with a view to making further recommendations on licencing and public protection.

In Northern Ireland, the situation is similar to that in England, where only registration of special cosmetic treatments exists, for a limited set of treatments. There should therefore be provision for Northern Ireland Executive to adopt a licensing scheme via regulations.

What can you do to help?

This amendment is cross-party with Caroline Noakes MP, Sarah Champion MP and Kevan Jones MP in support. We are asking MPs to join with them and to raise this amendment and the key issue of cosmetic regulation in Parliament.
